Handling precautions

1. Please do not add strong shock to the oscillator. In the time of transportation or installing the equipment, please do not drop or add shock to it. If strong shock is added, it may not operate normally. In that case, please use it after checking the characteristics.
2. Because of Oven Controlled Crystal Oscillator (OCXO), please do not place this product near heat sources, signal and noise sources that may affect the oscillator, and transmitter-receivers.
3. In OCXO, It is not recommended that some metal like a heat sink is placed on it directly, which is controlled by a specific high temperature, so that the characteristics cause unstable temperature control. Moreover, the ambient wind could affect characteristics by the same reason. The characteristic degradation by changing may occur according to ambient environment in the low temperature especially. Therefore, in the case of use of these products, please kindly do sufficient evaluation in advance on your side.
4. After soldering process, OCXO's characteristics may not be stable immediately because internal parts are influenced by the heat when soldering. For that reason, please avoid immediately using of these products after soldering and evaluate sufficiently in advance on your side.
5. If GND impedance of wiring pattern is high, OCXO's characteristics may not be stable because current consumption of OCXO greatly changes by the ambient temperature. In the case of use of these products, please kindly design GND impedance of wiring pattern to be sufficiently lower.
6. Placement of this product within the influenced area by magnetic field is not recommended because it may be affected magnetically. In the case of use of these products in such a situation, please kindly do sufficient evaluation in advance on your side.
